

Project Title

A Project SUBMITTED TO

NOBLE UNIVERSITY

Submitted in partial fulfillment of the requirements for the degree of

Bachelor of Computer

SUBMITTED BY

“Your Name”

Enrollment No: 03052000811

Faculty of I.M.C.A. / BCA

PREFACE

There is a wide difference between theory and practical. If one has only theoretical background of any subject, one would not succeed in own aim therefore it is necessary for any person to have acceptable practical knowledge of the concerned subject. As I know BCA is a course based on “Information Technology” and it is totally practical field. With only theoretical knowledge one can’t be succeeded or one can’t be on the peak position.

In the course of IMCA/BCA designed by the “**Noble University**” they have taken full care of these things and designed the course in such a manor with which student can get theoretical and practical both type of knowledge perfectly. According to the rules & regulation of “**Web Development**”, I have a subject named “**Project Name**”. In which we have to create a web project of any institute or industry.

As a **IMCA/BCA** student, I have gathered general information about Whole Admission Process. Then I decided to develop the site for that. In this site you can start admission to any collage very easily. You can also put the advertisement on this site.

In this project report I have covered all the information, which is required for the web project of **IMCA/BCA** student.

I have tried as my best to present this project report in such a way that it makes easy to understand the project work.

ACKNOWLEDGEMENT

I am thankful to all, who have helped me in preparing this project. I am very much happy to present this “**Project Report**”. Before you, expecting that you will acknowledgement it. It is a matter of great pleasure for me that I had an opportunity to express my view on the same.

As a part of my academic study as the student of 5th semester of **IMCA/BCA** I am required to experienced training software project an institute or industry in order to obtain practical knowledge and broaden me regarding the same.

At first, I would like to express my& humble thanks & gratitude to the who has provided me such a great, Co-operative & progressive environment.

Secondly at this moment, I would like to express my deepest sense of gratitude to my professor as well as project guidance who have contributed their precious time for the purpose of giving me the correct information with special interest & guidance throughout my project work.

I am also thankful to my classmate and few others who helped me directly or indirectly in solving problem & in making my software project more efficient & good working.

Chapter – 1

Introduction and Object of Project

INTRODUCTION

This project is specially designed for Students, because in this project Students Can Find online best Colleges and Courses and also can registered as a User in this project **“College Management System”**.

Students can place their inquiry for any Particular College and Course through our project **“College Management System”**.

The **“College Management System”** project is a multi-user system.

It has been developed in a way that allows user to perform the function smoothly and with proper accuracy.

The system is developed in **HTML, CSS, Java script** and some other software for designing purpose.

So, this system is very useful for all types of Students.

HOW IT WORKS

In this project first of all a homepage is displayed for all visitor, Students as well as registered Students.

This page will give information about **College Management System** details etc.

If user wants to place their inquiry, then they have to Login first. If the user is not a Registered User, He / She will have to click on the Signup Button and fill all fields in the registration form.

After registering in “**College Management System**”there you can see login button.

Users will have to login with registered mobile number and password.

After login, user will see User-Panel of “**College Management System**” Website.

There is various information about colleges, courses, inquiry and etc.

Chapter – 2

Tools or Platform

Requirements Details

❖ **SOFTWARE: -**

- ♣ Any Browser Like (Google Chrome, Internet Explorer, Mozilla etc.)

❖ **HARDWARE: -**

- ♣ Processor: P3 or higher
- ♣ RAM: 512 MB or higher
- ♣ Hard Disk: 50 GB or higher

❖ **TOOLS USED: -**

- ♣ Front End: HTML, CSS, JavaScript
- ♣ Operating System: Windows 7 or higher

3 - PROJECT PLANNING

No.	Task Name	Start	Finish	Duration
1.	Planning	15-July	23-July	1 Week
2	Analysis	25-July	30-July	2.1 Week
3	Designing	1-Aug	10-Aug	2.5 Week
4	Coding	15-Aug	2-Sep	3.5 Week
5	Implementation	5-Sep	10-Sep	1 Week
6	Testing	11-Sep	15-Sep	1.1 Week
TOTAL				62 DAYS

3.1 - SOFTWARE REQUIREMENT

JAVA Script: -

•JAVA SCRIPT ORIGINS: -

- JavaScript was released by Netscape and Sun Microsystems in 1995.
- However, JavaScript is not the same thing as Java.
 - o It is a programming language.
 - o It is an interpreted language.
 - o It is object-based programming.
 - o It is widely used and supported
 - o It is accessible to the beginner.

•USES OF JAVA SCRIPT: -

- Use it to add multimedia elements with JavaScript you can show, hide, change, resize images, and create image rollovers. You can create scrolling text across the status bar.
- Create pages dynamically Based on the user's choices, the date, or other external data, JavaScript can produce pages that are customized to the user.

HTML: -

- **HTML** is the standard Mark-up language for creating web pages and CSS and JavaScript it forms a triad of cornerstone technologies for the WWW.
- Web browsers receive HTML documents from a web server or from local storage and render them into multimedia web pages.
- HTML describes the structure of a web page semantically and originally included cues for the appearance of the document.
- **Hyper Text Mark-up Language (HTML)** can embed programs written in a scripting language such as JavaScript which affect the behavior and content of web pages.
- Inclusion of CSS defines the look and layout of content. The World Wide Web consortium (W3C), maintainer of both the HTML and the CSS standards, has encouraged the use of CSS over explicit presentational HTML since 1997.

CSS: -

- **Cascading Style Sheet (CSS)** is a Style sheet language used for describing the presentation of a document written in a Mark-up language. Although most often used to set the visual style of web pages and user interfaces written in HTML and XHTML, the language can be applied to any XML document, including plain XML, SVG and XUL, and is applicable to rendering in speech, or on other media. Along with HTML and JavaScript, CSS is a cornerstone technology used by most websites to create visually engaging web pages, user interfaces for web applications, and user interfaces for many mobile applications.
- CSS is designed primarily to enable the separation of presentation and content, including aspects such as the layout, colors, and fonts.

FUTURE ENHANCEMENT

A good project is one which never stops developing according to the changing situations and technologies there is a lot of scope of future enhancements.

- Online Registration For Colleges.
- User Search History.
- M.C.Q ForNew Visitor/User.
- Notifications to users.
- Change password option for users.

BIBLIOGRAPHY

For the successful working of my project I have referred many sources for the code snippets, logic and tips and tricks from the various books as well as web sites. Most I searched for the required possessions on the google.com search engine.

Web Links:

- W3school
- Bootstrap.com
- Geeksforgeeks.
